22 REDACTED VERSION OF DOCUMENT SOUGHT TO BE SEALED

23

1 **I. INTRODUCTION**

2 Once again, Waymo demands a do-over. After getting the breakneck schedule it wanted,
 3 Waymo used the Stroz Report as an excuse to back out of going to trial on the nine trade secrets it
 4 had chosen. In response to Waymo's plea for more time to review the Stroz due diligence
 5 materials, including source code, Judge Alsup set a new December 4 trial date and warned
 6 Waymo that "we're not going to argue about it."¹ In addition, Judge Alsup cautioned Waymo
 7 that "[t]here will be no new discovery" absent the Court's decision that it is warranted, and that
 8 Waymo must show a "genuine need" before it can amend its list of asserted trade secrets for
 9 trial.²

10 Waymo admits that it seeks this discovery to support as-yet-undefined software trade
 11 secrets that were not part of its March 10, 2017 Cal. Civ. Proc. Code § 2019.210 trade secrets list.
 12 Waymo has represented that it plans to formulate and assert brand-new trade secrets outside of
 13 the 121 trade secrets from the March 10 list, in disregard of the Court's directive that Waymo
 14 choose any new trade secrets to assert at trial from the original list. Furthermore, Waymo
 15 apparently seeks to review Uber's source code first and then draft new trade secrets to match—
 16 precisely what Section 2019.210 forbids.

17 Waymo also has not provided a valid basis rooted in the Stroz materials to justify the new
 18 discovery of source code it seeks at this late stage.³ After nearly a month of intensive review of
 19 the Stroz materials—and almost two months of access to Ottomotto source code modules
 20 developed by the Diligenced Employees—Waymo concedes that it has not found evidence of

21
 22 ¹ 10/3/17 Hr'g Tr, at 41:2-12 ("Nevertheless, I'm going to give you a brief opportunity, and when
 23 I say "brief" it's more than brief, but I'm going to give you an opportunity to make some changes.
 24 And I have to take into account my — my own court schedule, and I am going to give you a
 25 schedule, and we're not going to argue about it. It's just going to be the way it is, and you can
 26 take an appeal if you don't like it. So trial is now going — we're going to pick the jury on
 27 November 29. We will start with trial on December 4.")

28 ² 10/3/17 Hr'g Tr. at 41:24-42:4 ("There will be no new discovery, absent stipulation or Judge
 29 Corley decides that it's warranted."); *id.* at 42:5-19 ("[I]f you come up with some genuine need to
 30 amend it, there are suggestions in your brief that you found that certain trade secrets were violated
 31 by the due diligence thing, okay, maybe that would be work included in the motion to amend.")

32 ³ Waymo's October 9 motion to compel is untimely, because the Court ordered Waymo to seek
 33 any additional discovery as a result of the Stroz Report by 5 p.m. on October 6. (Dkt. 1964.)

1 misappropriation in the Ottomotto code. Waymo now demands production of Uber source code,
 2 arguing that it may contain undefined Waymo software trade secrets pertaining to lane-change
 3 functionality. Waymo cites only one instance of Waymo source code in the Stroz materials to
 4 support this theory: a few “snippets” of “Waymo source code related to route planning and
 5 changing lanes.” As it turns out, those snippets were presented by Google as part of an external-
 6 facing presentation to outside visitors from [REDACTED]. Waymo has made no effort to
 7 show how the few fragments of code contained in these presentations, given to at least thirty
 8 outside visitors, could contain trade secrets.

9 Given the December 4 trial date and Waymo’s failure to assert its yet-unspecified
 10 software trade secrets at the outset of this case, Waymo cannot meet the heavy burden of
 11 demonstrating that discovery should be re-opened for the sole purpose of accommodating a
 12 fishing expedition, especially where, as here, the discovery is unrelated to anything Waymo pled
 13 in its complaint and trade secrets list.

14 **II. ARGUMENT**

15 **A. Waymo Should Not Be Allowed to Take Discovery of Uber Source Code First
 16 and Then Draft New Trade Secrets**

17 Judge Alsup previously instructed Waymo to identify its revised list of trade secrets for
 18 trial “from its disclosure dated March 10 (Dkt. No. 25-7).” (Dkt. 1883 at 1.) Waymo nonetheless
 19 argues that it needs to compare the “current version of Uber source code” to Waymo source code
 20 (which has never been produced in this case) in order to identify and assert new software trade
 21 secrets. (Waymo Mot. at 3-4.) This proposed sequence of events is contrary to Section 2019.210,
 22 which requires a plaintiff to identify its trade secrets with sufficient particularity *before* it can
 23 obtain discovery. As Judge Alsup warned in *Jobscience*, “[e]xperience has shown that it is easy
 24 to allege theft of trade secrets with vagueness, then take discovery into the defendants’ files, and
 25 then cleverly specify what ever happens to be there as having been trade secrets stolen from
 26 plaintiff.” *Jobscience, Inc. v. CVPartners, Inc.*, No. C 13-04519-WHA, 2014 WL 852477, at *5
 27 (N.D. Cal. Feb. 28, 2014). In *Jobscience*, Judge Alsup rejected plaintiff’s request for another
 28 chance to amend its trade secret statement, finding that “[n]o more tries will be allowed,

1 especially now that plaintiff's counsel have seen the accused source code." *JobScience*, 2014 WL
 2 1724763, at *4 (N.D. Cal. May 1, 2014). Here, Waymo admits that the source code it seeks is not
 3 related to the already-identified trade secrets, but it wants to "go beyond Waymo's original list of
 4 trade secrets provided at the outset of this case." (Waymo Mot. at 2.) Waymo should not be
 5 allowed to take discovery of Uber source code first and then draft new software trade secrets to
 6 match. Waymo threatens to file a second lawsuit based on information from the Stroz materials,
 7 but it does not have a Rule 11 basis for a new lawsuit if it cannot articulate its software trade
 8 secrets under Section 2019.210 *before* discovery. *See Jobscience*, 2014 WL 852477, at *5 (a
 9 "true trade secret plaintiff" ought to be able to identify trade secrets without discovery); *Cf.*
 10 *Perlan Therapeutics, Inc. v. Super. Ct.*, 178 Cal. App. 4th 1333, 1350 (Feb. 18, 2010) ("If
 11 [plaintiff] does not know what its own trade secrets are, it has no basis for suggesting defendants
 12 misappropriated them."). (See Mot. at 2, 7.)

13 If the Court is inclined to grant new discovery, Waymo should be required to identify its
 14 alleged software trade secrets with particularity before it receives any access to Uber source code.
 15 *See Loop AI Labs Inc v. Gatti*, Case No. 15-cv-00798-HSG, 2015 WL 9269758, at *4 (N.D. Cal.
 16 Dec. 21, 2015) (staying trade secrets discovery until plaintiff filed identification of trade secrets).
 17 Further, the Court should only order production of Uber source code if its is narrowly tailored to
 18 the accused functionalities specified in Waymo's newly identified trade secrets. Waymo should
 19 not be allowed to go on a carte-blanche fishing expedition through Uber's source code so that it
 20 can craft brand-new trade secrets tailored to fit Uber's code. The Court should not allow Waymo
 21 to reinvent its entire case in the last two months before trial.

22 **B. Waymo Already Has Access to the Ottomotto Source Code Related to Lane-
 23 Change Functionality**

24 Waymo seeks Uber's current source code in order to review the "motion planning
 25 software functionality" developed at Ottomotto, but Waymo already has access to the relevant
 26 Ottomotto code and has not found evidence of misappropriation despite nearly two months of
 27 inspection access. (Waymo Mot. at 4-5.) Waymo identifies "motion planning source code" that
 28 former Google engineers Jur van den Berg and Don Burnette developed at Ottomotto and

1 provided to Uber, focusing on “lane-change source code.” (*Id.* at 4-5.) The code that Messrs. van
 2 den Berg and Burnette provided to Uber was Ottomotto’s motion planning optimizer, which was
 3 subsequently used to facilitate “lane-change” functionality in Uber’s already-developed code.
 4 (Dkt. 1976-6, Jaffe Ex. 3 at 144:15-146:1, 151:23-152:12 (van den Berg testimony on sending
 5 Ottomotto optimizer to Uber and visiting Uber); Dkt. 1976-7, Jaffe Ex. 4 at 97:10-98:7 (Burnette
 6 testimony on visiting Uber with van den Berg). The Ottomotto optimizer code – the only
 7 Ottomotto-developed component that contributed to Uber’s “lane-change source code” – consists
 8 of two files (██████████ and ██████████), both of which have been
 9 available to Waymo since August 17 and which Waymo has inspected. Waymo has not identified
 10 the optimizer or any other Ottomotto source code as evidence of misappropriation. Waymo
 11 cannot re-open discovery simply because the facts are not as Waymo hoped.

12 **C. Waymo Has No Basis for Seeking New Source Code Discovery from Uber**

13 Waymo’s purported basis for seeking Uber’s source code, which it never sought before
 14 the August 24 discovery cutoff, is a sham. Waymo previously moved to compel production of
 15 **Ottomotto** software modules that were part of the acquisition. (Waymo Mot. at 4.) The Court
 16 granted that motion and Uber produced the Ottomotto software modules for inspection.
 17 Notwithstanding its very loose standards for alleging trade secret misappropriation, Waymo
 18 evidently found nothing to complain about as a result of that inspection.

19 Waymo now argues that it should be allowed access to Uber’s current source code,
 20 specifically the “motion planning software,” based on “snippets” of Waymo source code from
 21 Exhibit 37 to the Stroz report and several stray references to source code in the Stroz Report.
 22 Each basis is meritless.

23 The “snippets” in Exhibit 37 to the Stroz Report are the *only* Waymo source code that
 24 Waymo claims to have found in the Stroz materials, and they provide no basis for further
 25 discovery. The snippets in question comprise two duplicate copies of six images of Waymo
 26 source code, which Waymo argues are ██████████ (Waymo
 27 Mot. at 3; *see* Dkt. 1976-5, Jaffe Ex. 1 (attaching Exhibit 37 to Stroz Report).)

28 The metadata for each image in Exhibit 37 (readily available to Waymo via Stroz’s review

1 platform) reveal that the first six images came from a presentation named [REDACTED]
 2 and the latter six images (which duplicate the first six) came from a presentation named
 3 [REDACTED] (Declaration of Michelle Yang (“Yang Decl.”), concurrently filed
 4 herewith, Ex. 1 (metadata report) (screenshot below).)

5 [REDACTED]
 6 [REDACTED]
 7 [REDACTED]
 8 [REDACTED]
 9 [REDACTED]
 10 [REDACTED]
 11 [REDACTED]
 12 [REDACTED]

13 The presentations themselves are high-level overviews of various Google projects
 14 presented to outside groups by Anthony Levandowski. (See Yang Decl. Ex. 2 at
 15 STROZ_R_000249955-996 (presentation to [REDACTED]
 16 [REDACTED] (cover below); Ex. 3,
 17 STROZ_R_000002737-768 [REDACTED]

18 Waymo’s motion fails to mention that the only Waymo source code found in the Stroz
 19 materials was actually shared with audiences from outside Google, with no evidence of an NDA.
 20 (See Dkt. 923 at 1 (granting motion to compel production of any Waymo confidentiality/non-
 21 disclosure agreements).) An email from the Stroz materials indicates that Levandowski gave the
 22 [REDACTED]
 23 [REDACTED]. (See

24 Ex. 4 at STROZ_R_000249948-49 [REDACTED]
 25 [REDACTED] The “snippets” from Ex. 37 are hardly stolen
 26 crown jewels: they were insignificant enough to use as examples to explain Google’s source code
 27 revision process, such as [REDACTED] to outside visitors such as energy and insurance
 28 executives. (See Ex. 3 at STROZ_R_000002757 (see representative slide, below); cf. Dkt. 1976-

1 5, Jaffe Ex. 1 at UBER00312870, -872, -873, -876, -878, -879, -880 (“snippets” from Exhibit 37
 2 reflected in the slide below.) Waymo has made no showing, or even argument, that the snippets
 3 of code in these presentations to outside groups could contain trade secrets.

16

Waymo’s other “new information” from the Stroz materials fares no better in supporting source code discovery. Waymo quotes two references in the Stroz Report to source code on Levandowski’s devices, but both refer to files that were apparently deleted and never received by Stroz. Waymo first quotes the Stroz Report’s reference to “source code, design files, laser files, engineering documents, and software related to Google self-driving cars,” but omits that this quoted language was in a discussion of “Destroyed Personal Drobo Disks,” the five disks that Levandowski claims to have destroyed on March 11. (Compare Mot. at 3 with Dkt. 1603-5, Stroz Report at 10.) Waymo has known about the past existence—and present unavailability—of those disks for months from a June 8 interrogatory response and has deposed multiple Uber executives, including Travis Kalanick, back in July. (See e.g., Dkt. 695 at 5; Ex. 5, 7/27/17 Kalanick Dep. at 22:8-25-8). Waymo also quotes Stroz’s review of “the names of the deleted files” on Levandowski’s laptop, but it offers no explanation for how deletion of files from a “chauffeur-

27

28

1 “svn” folder justifies further discovery into Uber’s current source code. (*Compare* Mot. at 3 *with*
 2 Dkt. 1603-5, Stroz Report at 12.) Nothing in these cited sections refers to any Waymo source
 3 code retained by the Diligenced Employees. Waymo seeks to “compare the retained Waymo
 4 code with Uber’s implementation” (Mot. at 3), but there is no retained Waymo code to compare.

5 Waymo next quotes a Stroz Report reference to “images from [ex-Waymo engineer Don]
 6 Burnette’s computer that appear to be snippets of source code.” Waymo fails to mention that the
 7 pictures (which are attached to the Stroz Report as Exhibit 134) depict Ottomotto source code, not
 8 Waymo source code. (Yang Decl. Exs. 6A & 6B (Exhibit 134 and high-resolution natives
 9 showing Ottomotto file paths).) Waymo has made no claim that this Ottomotto code was copied
 10 from Waymo. (Mot. at 3.)

11 The only other Stroz-derived evidence cited by Waymo is a copy of Diligenced Employee
 12 Don Burnette’s quarterly Waymo performance review found in his personal Gmail account.
 13 Mr. Burnette drafted the review himself and discussed his own work fixing bugs in self-driving
 14 software. (*See* Dkt. 1976-8, Jaffe Ex. 5 (Burnette performance review (excerpt below).))

15
 16
 17
 18
 19
 20
 21
 22
 23

24 Waymo makes no attempt to link Mr. Burnette’s description of his own work to any
 25 alleged trade secret, and fails to allege any use of information from the performance review in
 26 either Ottomotto or Uber’s software. All Waymo has is the fact that Burnette worked on motion
 27 planning at both Waymo and Ottomotto—which Waymo knew independently of the Stroz
 28 materials from Burnette’s prior deposition testimony.

1 None of the “newly disclosed” information that Waymo cites warrants new source code
2 discovery. The only actual Waymo source code among the Stroz materials was disclosed to
3 outside groups, [REDACTED]. Should discovery be re-opened based on these already-
4 disclosed snippets, Uber would also need discovery from Google of its practices regarding
5 outside group visits, as well as discovery from [REDACTED]. With trial scheduled to
6 begin in less than two months, and Waymo’s failure to link any Stroz materials (source code
7 snippets or otherwise) to its alleged trade secrets, Waymo’s request for new discovery jeopardizes
8 the trial schedule for no good reason. It should be denied.

9 || III. CONCLUSION

10 Waymo essentially concedes that it wants to go on a fishing expedition. It has already
11 reviewed the Ottomotto source code and the Stroz due diligence materials and has deposed
12 Diligenced Employees for a second time based on the Stroz materials. Coming up short, Waymo
13 now seeks completely new discovery of Uber’s source code, with the improper goal of drafting
14 new trade secrets after reviewing Uber’s code. Waymo’s motion is based on nothing more than
15 “snippets” of Waymo source code that were already disclosed to third parties outside Google.
16 Waymo has not demonstrated a proper basis for re-opening discovery into Uber’s code, and its
17 motion to compel production of Uber source code should be denied.
